

Catharine Walkinshaw

I am strongly against this project because I live in the air and water basin of this project and we already have degraded air quality along with depleting groundwater quality and quantity. This behemoth of a project will only make these problems much worse for little to no benefit to myself, my family, and my community.

Further I request a 60-day public review period before any permit is issued. This public review period should also include multiple public meetings in the region especially in Santa Teresa.
