

## Em Anonymous

Project Jupiter is harmful to the environment and planet in a serious enough way that it will impact people as far as I am from NM and further. When you bend to the whims of corporations, what do you hope will occur? When the last of our plant life dies, our elderly and children can't hear anything over the overpowering sound of data centers, and people start to fight back, who will they blame? Do not let it be you. Do not participate in the growth of AI, the prioritization of money over humanity. It is more than a reasonable demand that those impacted may be involved in the permission of this data center. Allow the public, in New Mexico and beyond to participate in the decision making. Oracle, its partners, and its executives will not be harmed by the enabling of this super campus. It will be real humans, people who were born and raised in New Mexico. Allow them to be able to have an additional 60 days to review and comment. If simply striking it down is not within the realm of possibility, though that should be the priority especially with Bloom Energy's history with dumping waste, a public hearing MUST be held in Santa Teresa in both English and Spanish, available to participate in virtually.
