

Matthew Harder

This permit should be denied as it will be harmful to all those living in the area. The negative effects of air quality near gas power plants have been well proven with nitrous oxides and particulate matter hurting anyone downwind, but this microgrid will be worse even then those as the electricity demand for the data center will be constant and the gas generators will need to be run all the time. I fail to see how this microgrid which will burn enough gas to power a significant portion of New Mexico could not have an effect on the local population in Santa Teresa and Sunland Park similar to what xAI has done to the people of Memphis. Bloom Energy have proven themselves not to be trustworthy with a history of illegal dumping, and now are given the opportunity to dump pollutants into the air.
