

Jessica Eubank

I urge the New Mexico Environment Department to reject this permit over concerns that the applicant's intended project will have catastrophic consequences for New Mexico. Their application acknowledges that they are intending to run a continuous power plant. That is 8,760 hours per year of pumping harmful waste byproducts into our air. Over the course of just a few years that number climbs to the tens of thousands of hours polluting our land. I am greatly concerned about the impact this will have on the land, flora, fauna, and most of all the people of Doña Ana County. I urge the department to consider the long term (and honestly short term as well) environmental impact this permit will have. I ask that you would consider the precious resources that will become wasted and polluted by waste as part of the Yucca Growth Infrastructure LLC's operations on this project as too dear to sacrifice. I ask that you would reject this permit.
