

Chloe Kendall

Im writing this message in opposition of Project Jupiter.

A single AI center uses as much electricity as 80,000 homes. When you say that the prices of the electrical bills will not rise for people in New Mexico, it is just simply not true. The building of this data center will continue to contribute the destruction of our environment.

You are actively harming the people who not only live in New Mexico, but America in general. We do not need AI to live, it is not a necessity like water, food, and shelter. America does not NEED more data centers to fuel the use of things like AI.
