

Angela Stevenson

Project Jupiter will only harm our communities with little to no benefit in turn. It is harmful to our water supply, air quality, and the communities that subsist on them. It is not sustainable and will not improve New Mexicans' lives in any way, shape, or form. In fact, it is to our detriment to allow this to be constructed in our state. We do not need an AI data processing center in Doña Ana County. The harm, including raised prices on our utilities and water scarcity in a region that hardly has enough water to support its population and agricultural needs, significantly outweighs any positive attributes the project will bring. For those of you who believe this is an economic opportunity, you need to re-evaluate. What will New Mexico's economy look like with no water in an agriculturally dependent region? This project is guaranteed to only bring destruction and chaos to our state.
