

Bryana Olmeda

As a field botanist, who has spent the past 4 years specializing and observing Chihuahuan Desert plants in New Mexico, specifically in the Bureau of Land Management, Las Cruces District, I am opposed to any permitting for Yucca Growth Infrastructure.

This data center will negatively impact air quality, and use a substantial amount of water in an area that is already experiencing immense drought driven by climate change. The pollutants (both air and noise) produced by data centers negatively impact the land and people around them, primarily in low income neighborhoods of color.

I have studied how the dwindling amount of water and extreme heat waves have negatively impacted the quality of life, for plants, and people. Project Jupiter will exacerbate these issues. Air and water are not resources, they are a necessity for life. Project Jupiter will not help this community and I do not support it.
