

## Angel Hernandez

I am writing to formally express my strong opposition to the proposed "Project Jupiter" data center development in Santa Teresa, New Mexico. As a resident deeply invested in the future and well-being of our community, I urge you to consider the significant negative impacts this project poses to our region.

Our community is currently facing critical water scarcity challenges. It is unacceptable for an industrial project of this magnitude to consume massive quantities of water, a vital resource that must be prioritized for human consumption and the sustainable growth of our families. The strain this usage will place on our local supply poses a direct and unacceptable threat to our long-term water security.

Furthermore, I am deeply concerned about the potential degradation of our air quality and the long-term impact on the public health of residents in Santa Teresa and surrounding areas. The operation of infrastructure at this scale threatens both our environmental stability and the physical health of those who live here.
