I DO NOT SUPPORT PROJECT JUPITER.

New Mexico does not need a massive data center using our precious water and polluting our lands. It is yet another instance of environmental racism, Doña Ana county being primarily inhabited by non-white individuals. The project's claim that they will use "non-potable" water is merely a distracting phrase. Water is water. It's a precious resource that New Mexico can't afford to squander on a data center. We do not need more of these centers. The U.S. already had more than anywhere else in the world, and they are almost always built against the wishes of the community of everyday people they inhabit. The promise of jobs benefiting the community is a lie or at best a gross exaggeration. The majority of jobs created are not the blue-collar jobs that the community would benefit from. NO DATA CENTER IN DOÑA ANA COUNTY OR ANYWHERE ELSE IN NEW MEXICO.
