We never needed AI before, why is it that now it is the main focus of all the funding in the world when tons of people are suffering from poverty, abuse, hunger, and many more. I encourage all those in favor of this project to remember that this will be detrimental to Earth and consequently to our children's future. This power plant will release 10 million tons of greenhouse gases per year and due to it being an AI data center, it will also affect the water quality of the area around it. If NMED truly is acting in the interest of its community, it should reject YUCCA Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid.
