

Elizabeth Nicodemus

Hello, I am about to turning 21 in a couple months. I still have my whole life left to live and I want to be able to enjoy my life and the world around me. I want to travel, hike, explore, etc. I want to be able to enjoy the planet we live on. If this data center gets built it will have unfixable consequences to the environment and will destroy many ecosystems. We only get one earth to live on, why are we destroying it? Why aren't we protecting it? We don't need more AI, we do not want AI. I can think for myself, I can create for myself. I do not need an AI robot telling me everything. While I do think there are some good uses for AI like help for disabled people. I saw a video of a deaf woman and a blind woman being able to communicate through AI technology using Morse code. Things like that can be very beneficial uses for AI but there are better ways to do it than this project. We need to find ethical ways to produce AI. We as humans have brilliant minds, we can figure out ways to make AI not harmful. We also do not need so much of it. Think about the consequences this data center will have on our planet before going through with building it. Think about how many people are already struggling to survive because they can't find enough water, food, etc. Also we are actively seeing the effects of climate change with this massive heat wave coming through. It is only going to get worse from here but it is not too late to stop it. I speak for everyone and everything when I say please consider what this will do to our planet.
