The climate crisis will change our planet forever; it's a long-term issue that is compromising the needs of future generations. Our grandchildren will grow up on a planet with extreme temperatures, frequent natural disasters, and without drinking water. This is why we should all acknowledge that climate change is OUR problem and it is up to us to prevent it. However, building data centres prove that people who have a hunger for power also have a hunger for money and lack any concern for our environment. Data centres are going to strip our environment of its clean, fresh water and air quality and will contribute more to the climate crisis than thousands of average Americans. Building data centres means backing the climate crisis. It proves that people truly care more about money than their own grandchildren and more about money than their planet. We don't deserve this. Allow the public to express their concerns. Deny the permit applications. The future of our planet is down to our actions.
