

Christian Jackson

I am commenting today to ask the Air Quality board to revisit the permit and extend for 60 days to allow revision. The permit should be denied, one of the groups involved has already been fined for improper management of biohazardous waste. New Mexico deserves better. Project Jupiter has repeatedly been dishonest about the resources it will require and impact and should not be trusted with the states land and resources. Data centers are continually being built in poor communities and perpetuating environmental racism.
