

## Zachary Borders

Though I am not a resident, and would not be impacted by Project Jupiter, and am still appalled at the environmental impact this will have on the environment. The population of the communities near Project Jupiter should be given an additional 60 days to review the air quality of their home. Given Bloom Energy's history of causing environmental hazards, the air quality permit application should be denied. If the permit isn't denied, there should at least be a hearing in Santa Teresa. Approving the permit anyway would contribute to harming the residents of Doña Ana County through environmental impact. These demands should be held in order for the local communities to have their say in the environmental upheaval that Project Jupiter will have on their home. Thank you for listening.
