

Rogelio Gutierrez

AI is destroying the environment, and negatively affecting people's mental health and capacity to think for themselves. It was advertised as something that would allow humans to work less while AI facilitated their jobs, now it has been out for years and so far it's only purpose has been for malice; generating false information, sexual content (often regarding content that would otherwise be illegal), cheating/plagiarism, and just downright incorrect and inconsistent answers to even basic questions. Now we must work more to pay for someone else's electricity bill, so they can shove down this "tool" no one asked for. We are in a desert state, water is scarce and the days are very hot as it is. We pride our state in our diverse communities and environments, rooting for AI harms these both as AI uses an insane amount of water (which the desert isn't known for having) and causes immense heateaves and sound pollution that affect our quality of life and that of the animals. AI is a surveillance tool, nothing else but Big Brother incarnate, why would we give up our freedom of privacy to receive conditions that are worse off than how bad things are already? NO AI, NO PROJECT JUPITER, NO BLACKROCK OR PRIVATE EQUITIES
