

Mike Petres

THIS IS BAD FOR OUR ENVIRONMENT! Respectfully, I know people have addictions with AI. But it's destroying our planet and there's nothing we can do about it, or can we? I just wanna say, I know how hard it is to avoid ai, we can switch to ECOGPT instead of Gemini, grok, and chat gpt. These all use more than 39 million gallons of fresh water. It's truly bad. The fuel cells release 10 million tons of carbon dioxide, and that means weather will and can be deadly. We're the last generation to fix climate change and to feel the impact. The rio grande has been drying up even before summer has began! That's how bad it's getting, it's not a heat wave! It's major companies and AI taking advantage of our planet and drying up, but seems like no one cares! these data centers are threatening our communities that depend on the only freshwater we need to survive. REMEMBER, FRESH DRINKING WATER IS LIMITED. We don't need Oracle or AI. Project Jupiter is not needed, these are all mistakes we are making. I will say that humanity will be the end of humanity, it's not safe for us either. We will run out of fresh drinkable water in a few years and global warming will be worse than we have expected. This summer is the coldest it will get, and that's not good at all. No one cares though. I hope that you all realize this is not gonna be helping us or the earth, there's not another planet, no planet B, never will be. Keep submitting these comments and it will cause a little impact now, but now it could be more powerful than we expect it to be. Everyone's losing hope, don't lose it! It's doing something to our planet, it may not be much but there will be more people that are anti-ai! AI will be useless and always will be, teachers use it, and others will to. That doesn't mean that we should use it and follow into their own footsteps and be in their shoes. Their shoes are useless. We can do something about it! It can help everything about the planet! Not much we can do but we can do something.

SAVE OUR PLANET! Ai is using pictures of children to make deepfakes and more. It's not only dangerous for our planet but for children. Our earth will dry out more than we can think. We can do something! Please submit one comment! If not, more! It will do everything to people against ai and are anti-ai. Some people have to fight for clean water, and water drying out is already happening. This even causes health risks. I do not want to do a public hearing if this is accepted and not denied. I don't wanna speak as I don't want to be publicly humiliated. So I ask of you respectfully, please do not make me hold a public hearing in Santa Teresa if my permit is accepted. Thank you.
