AI data centers negatively affect communities within less than a year of their existence. Continuous implementation of them will no doubt result in resource fatigue as we put unneeded technology above human well-being. There is absolutely no need to establish more AI data centers. In fact, our efforts should be moving towards making current ones more sustainable for the human population. Please allow the community 60 days to review and comment on the air quality permit. The permit should be denied, but if it is not then a hearing should be held in Santa Teresa.
