

Kris Kildeeva

Project Jupiter has to end for a plethora of reasons. Data centers are stealing our water to fuel AI, which should be worth less than a human life but people higher up don't see it that way. AI already has done so much damage to our society, imagine how much more will happen within the span of a decade or two. We as a society have grown dumber and lazier. By allowing data centers to be built we are jeopardizing our future, and the future of all children. More and more water is used to fuel these ugly data centers, meanwhile millions go thirsty. AI is taking over more and more jobs, which means that there are fewer jobs available to the working class. This could lead to a huge growth in homelessness in a couple of years. AI can also be used to create images and videos that have the ability to ruin someone's life. Data centers also cause a lot of noise pollution and environmental pollution. Children having easy access to AI is a really bad thing. We have seen kids and teens using it to cheat on academic work and exams. This contributes to the downward trend in literacy rates and overall intelligence. In a decade or two, we could see the dumbest and laziest society yet. This could mean more homelessness, more pollution, more deaths, avoidable and unavoidable, and so much more. The noise these data centers make harm the animals, nature and citizens/communities near by. Neurodivergent people could go crazy because of that constant noise, but may not have the opportunity to move. There are many more issues with data centers, however these issues can lessen by stopping Project Jupiter. The public should be given an additional 60 days to comment on the air quality permit so community members can pat equitably. The air quality permit application should be denied given Bloom Energy's history of dumping hazardous waste. If it is not denied, a public hearing should be held in Santa Teresa in both English and Spanish, with an option to join virtually. Lastly, approving this permit is government-sponsored environmental racism as residents at Doña Ana County are already disproportionately impacted by environmental pollution.
