

Amy Louise

Please do not approve permits. Approving the permits would impact air quality immensely. It would be more than the pollution of the 2 largest cities in NM. There is already air quality issues in southern NM due to El Paso and Mexico. Also NM is in a long term drought. The rivers, streams, and aquifers are going dry. The reservoirs are at record lows. We need the water for our cities, wildlife, rivers, streams, farms, and reservoirs, Data centers have no business coming to NM. Also, there are major concerns about our culture, public lands, wildlife, light pollution and noise. Even in locations where there is adequate water, cities do not want Data centers. There should be guardrails in place before anymore Data centers are built. They also increase utility bills. Please do not approve the permits for this massive data center that would negatively affect NM. Respectively, Amy Louise, retired Civil Engineer.
