

Lillie Winterton

Any kind of data center in New Mexico is an environmental risk we can't take. They can revise their plans and proposals again and again but they don't care about us. They don't care about our water and they don't care about our people. They're going to pollute our deserts and our rivers and they're going to destroy New Mexico. Always vote no to any data center. It's not going to create jobs, ai has the jobs. It's a net negative, please don't allow our communities to get polluted because of this. Vote in the interests of New Mexico, which is preserving the land of enchantment. Thanks.
