

Karl Hakmiller

New Mexico is a land of limited resources and a state with a history of pollutive exploitation. Clean air in our state is as precious as our water, and both resources are threatened by shadowy, billionaire-funded data center projects that promise nothing but increased energy bills, increased air pollution, and hundreds of thousands of gallons of water wasted daily on evaporative cooling.

For what? Half a dozen jobs? A brief stimulation of the construction industry that will boom and then bust?

I firmly oppose any permitting to Project Jupiter, whose backers are anonymous and flooding the state with pro-data center propaganda and the streets of ALbuquerque with out of town canvassers.

Do we want our grand children to be proud of us or ashamed?

Reject the permit for the good of New Mexico.
