

## Amy Locke

Please reject Project Jupiter's air permit application. New Mexico does not need an AI data center that will emit more pollution than Albuquerque, Santa Fe and Las Cruces combined. We do not need an AI data center that is going to use millions of gallons of water in the middle of the desert. We need to put a stop to data centers, not create more. The developers do not care about New Mexico or its residents; they care only about their profits. Please show that you do care about New Mexico and its future. Please deny their air permit application.
