

Elissa Roa

I am a resident of Carol Stream, Illinois. I do not want this data center to be built at all and I do not wish for communities who are already suffering from droughts and water scarcity to face even more harm with this data center being in place. Though I do not live in the state of New Mexico, it is obvious that water is not something that can simply be regenerated and just magically become abundant again. This data center is not needed at all and should not be taking valuable resources that people need to survive. The pollution that it could emit into the atmosphere can speed up climate change which can affect everyone, who lives on planet earth.
