

Eziolachi Eruchalu

My name is Zizzi and i believe that no ones lives should be endangered for the sake of data centres. Our climate, which is already reaching its limit at a faster scale than previously thought, should not be pushed further for the sake of AI!! We rely on the environment around us and therefore to abuse it is so inhumane. We cannot live without the oxygen that will be displaced by the tons of carbon dioxide exuberated into the atmosphere. To carry out this project is to speed up the downfall of humanity. Stop trying to turn everything natural into capital and actually start focusing on the environmental issues at hand. All the shallow people involved with this project should be ashamed of their apathy towards the dying planet.
