I am a resident of Albuquerque, and I am asking that you deny Yucca Growth Infrastructure's air quality permit. Not only do I live here, but so do many of my friends and family. Our future is under threat with this proposed air quality permit. A change to fuel cells has minimal impacts on the suffering we will endure as a result of the gas plant's air pollution. To add 10 million tons of carbon dioxide pollution and a vague estimate of toxic emissions to our active and long-time non-attainment zone would be nothing short of blatant environmental racism. It's unhealthy and unethical. Our metro area is currently 16th worst in the nation for ozone pollution and we have received a failing grade on this air quality standard every single year since 2000. We are already breathing some of the most compromised air in the country. It is unacceptable to invite a new source of hyperscale air pollution into our communities. The carbon dioxide pollution alone will heat our atmosphere at a much faster pace and promote the formation of even more ground-level ozone. I can barely pay my electricity bills in the summer as it is and the heat wave is negatively impacting people's physical health and well being. We cannot afford more intense heat. The other toxic air pollutants are extremely dangerous—many of them at very low levels. Fuel cells also create hazardous waste and the fuel cell provider for this project has a history of illegally dumping this waste and hiding it for several years. This company will likely repeat its bad habits. We cannot have that.
