

Kaileigh Hoyes

You CAN NOT deploy project Jupiter in New Mexico you will destroy our water and air. We as a state already are fighting for water and you will destroy everything here. We are already in a very hot year and you will make everything so much hotter. Do you want this to be the coldest summer you've ever been through because this will make it that way. We dont have enough surface water or ground water to contain something like a stupid ai data center that makes slop. Project Jupiter will destroy New Mexico. It will destroy our air, it eill destroy our water. Make the right choice for New Mexico not corporate greed. If you approve this project you are going agenist what your company stands for. You eill be actively harming our environment , air and water. Make the right choice for the people who call this place home.
