

Rachel Hickman

Joining the voices of many, many neighbors near and far, I urge the NMED to deny this permit application for the YGI Microgrid. Our Rio is dry and our valleys already have poor air quality, blown in from increasing fires, blowing dust, and pollution. The requesting company has not provided sufficient or credible data to back their claims, and have recently launched a campaign to gather signatures in bad faith. They cannot be trusted. New Mexico deserves better. New Mexico deserves sincere, future-forward energy solutions that serve our people and these lands for generations to come. This application is not it.
