

Sarah Silva

There is no reason for this data center to be build it takes up to much of the very little resources we have in our state alone. The quality of life in this town will be affected tremendously from our natural resources such as our clean drinking water, electricity, money, ect. This data center will effect everyone and anyone living here no matter location of residence, class level, or any other factors. It may seem innovative but we are not thinking of the lives and future of our friends and family. Do not let your actions and character be driven by the promises of money in the future. Human beings as a whole cannot drink money, we can not eat money. We will have nothing left to provide for basic survival for not only ourselves but our children as well. We as people are not only losing our resources but we are also loosing our knowledge by using Ai and other engines to do our work for us. We people are the future and we need to retain and learn as much knowledge as we can to pass down generations to live. With technology becoming as powerful as it is we as people are losing basic skills to cook, build, sew, create, because we rely on technology and money for ourselves. We the people in our community are strong and if you care about your family, your home, and your future you will not support Project Jupiter or any other data centers that may be proposed to in the future.
