

Simon Riley

I am submitting this comment to express my opposition of YGI's Application. I demand you to also reject the Yucca Growth Infrastructure, LLC-YGI Microgrid Air Quality Construction Permit Application.

YGI's application should be denied by NMED because YGI failed to include all relevant information about Bloom Energy's problematic history, including their habit of illegally disposing of hazardous waste. Conveniently, that same hazardous waste will be produced massively by the proposed data center.

YGI's Application should be denied by NMED because they have falsified comments of support using both real individual's information without their consent -facing legal troubles for doing so- and the mass submission of bottled comments.

Bloom Energy's Fuel Cells are not clean energy – no matter what YGI says. These fuel cells generate significant NOX, CO, and VOCs, all of which contribute to negative health impacts, as well as hazardous solid waste that cannot be ignored by NMED.

Permitting any microgrid facility will result in a clear example of environmental racism and NMED is required to ensure no group of people bears a disproportionate share of negative environmental consequences. This is especially important because Doña Ana County residents already bear the disproportionate burden of environmental pollution compared to the rest of New Mexico.

NMED should give the public 60 days of additional time to review and comment on the application to ensure everyone can meaningfully comment and participate.

If NMED does not reject YGI's application, NMED must hold a public hearing on the Application in both English and Spanish, in a hybrid format and in person in Santa Teresa so that all individuals may participate equally.

New Mexico doesn't want these disgusting, vile, ugly data centers anywhere near here,
