

Jessica Alsup

I am writing in opposition to approving the air quality permit for the Jupiter Project/Yucca Growth Infrastructure LLC. Multiple sources, studies, and examples show the extreme environmental harm these types of data centers cause. The pollution created by this particular data center outpaces the pollution created by the cities of Albuquerque, Santa Fe, and La Cruces combined. Further, Project Jupiter has allegedly been falsely using New Mexican citizen's names to support their cause, paying online influencers to spread misinformation, and has been paying for ads that omit important facts about the impact of this data center. These unethical practices speak to how this company does its business, and any information they give to satisfy this application should be highly scrutinized and outright rejected. The State of New Mexico should be doing everything in its power to prevent the completion of this project, and therefore this application must be denied.
