

## Anon Anon

I am a resident of Cartersville, Ga. I've lived in only one other state, but two other cities. not only is this the last generation able to do something about climate change. we're the ones getting it the worst. the world has prospered without the use of Ai and "unnecessary" plants, so why should Yucca Growth Infrastructure aka Project Jupiter be any different. When put against pros- and cons. Cons out weight whatever delusional plan of what Project Jupiter is. it will worsen the limited water and continue the line of destruction. A statement says, "Fuel cells also create hazardous waste and the fuel cell provider for this project has a history of illegally dumping this waste and hiding it for several years." isn't the lives of our people or earth more valuable than that? though it won't effect everyone at once, doesn't mean it won't effect them at all.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
