

Sophia Oprat

This is a data center that requires a million gallons of water to keep running each day. Is this not excessive? Is it not enough? When is enough? We have survived for years without ai and similar types of technology. There are more environmental friendly ways that allows for the use of ai. Ones that don't require a million gallons of water every day. If this were to be built it would essentially be writing new future for humans. One where the planet is destroyed, one where the damage cannot be undone. And for this the blood of humans and animals will be on your hands.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
