

Sarah Swan

Project Jupiter will threaten our already limited water supply that's ALREADY being threatened by large cooperations that use far too much water (Example: Nestlé) I fear for my future, I cannot be a Maritime Archeologist if there is no water for the Maritime part. Project Jupiter also will cause many animals to go extinct along with ruining already fragile ecosystems. Please, stop project Juptier before it happens because once every river is dry and all the animals are toxic I hope these people realize that you cannot eat money and that this is our only planet, we cannot live and prosper in any other ones.
