

Margarita Ortega y Gomez

Project Jupiter is a multilevel threat to our community's water, air, and land. Data centers in many communities present major noise and light pollution issues and degrade air quality at levels that are unprecedented. Here in NM, we already are experiencing a critical level of drought (just head out to the Rio Grande) that indicates how inappropriate it is to host an extractive operation such as Project Jupiter. It's clear that the mega corporations making this deal go thru have no interest in considering the wellbeing of our community, or they'd cease this project immediately. It's clear that the research doesn't substantiate this type of project and this is a rush job to extract as much energy as possible for a quick buck before the climate totally collapses for us in NM. Please stop this from moving forward- for the best interest of our community.
