

Kel Burton

I am a constituent from Detroit, MI and denying this project going through is a no-brainer. One Data center alone can run an entire community out of their water. This project will be A THOUSAND times larger than that. might as well just run the whole state of Texas out of their water! Not only will this project drink up all the water, but it will also emit TEN MILLION TONS of CO2 and illegally emit hazardous chemicals into the atmosphere, as Bloom Energy has done before. Approving this project specifically and deliberately threatens the spanish communities of Doña Ana County, which is environmental racism, let alone sponsored by the government themselves (but is that really any surprise at this point?) In this event there must be a public hearing in Santa Teresa in both English and Spanish. Jeff Bezos recently said that "Human water consumption limits AI potential". Say, Jeff Bezos, in the event that dehydration hasn't killed you too, who will be your cattle then?
