

Amani Ramirez

I'm from California, an incoming senior in high school. I have never been so terrified to grow up just due to the fact that AI data centers are growing, polluting our air, taking our water. What will we do? There is so much lost hope in the youth because of this, all these impacts make me reflect: am I going to get to have my own family, live a happy life with beautiful nature, have CLEAN drinking water? It is almost impossible to know. I pray to God as a society we realize how horrible this is, and the impacts this has. It is almost as if there is no care for our planet, and what makes it worse it the ones making these decisions are old, gen X, who don't have a future like us. I'm scared, and that shouldn't be the thoughts of a 17 year old. We lived without AI and we were amazing, life was beautiful, now we are slowly entering into an irreversible age of damage. I love this planet and all the nature and wonders it gives us, please stop and work to put a full ban on these centers, if not I can say goodbye to my future and yours.
