

## Addison Gaynor

This project you are proposing and starting will ruin your communities. Especially your food chain, with how animals rely on plants and other animals, a data center the size of manhattan will quickly kill them off, endangering them. For your communities it means a lack of food for the people, it also means sicker citizens. With the amount of pollution this data center will produce, citizens, especially children are very likely to contract diseases such as cancer from the production. The amount of water ai is using is causing death and pollution to our sea creatures, which will once again affect our food chain, along with water. Changing the method of how you power it does not change anything as fossil fuels are one of the top ten reasons of global warming, actively killing our planet. With this you're killing the planet. There is no other planet for us to go to. You're putting the entire world at risk with this data center. Just because billionaires are paying for it, does not mean it's right. No one in the right mind would follow through with this solely because billionaires are paying for it. If you do follow through with this, you truly do need a mental evaluation on where your priorities for your communities are.
