

Rachel Colean

Dear Secretary and staff,

Please schedule a public hearing on the Jupiter application. The applicants are flooding our public zone with disingenuous PR and have been illegally misrepresenting citizen's views. New Mexicans need you to stand firm in protecting the public interest. Jupiter is not in the public interest either short term or long term. Just the air permit proposal itself is insanely disqualifying.

This is from a social media post by Mitchell Freedman from this morning: I agree wholeheartedly that New Mexico has a better path forward than letting these outside mega-corporations abuse us.

"There are much more visionary policies progressives support which would more successfully diversify our state's economy, starting with robust infrastructure development to allow small communities throughout the state to be connected to each other. This is called preparing for success while giving jobs to so many here who will gain great skills. This would be concurrent with water policies that help first and foremost ranchers/farmers save and recycle their water (they use 70% of the water, folks, not your five minute shower)...It's just about helping others who are connected to the rest of us. We who live in suburban/urban areas can show we truly care about the lives of rural New Mexico by helping them directly through mass transit development and water conservation programs. Not private prisons. Not energy and water eating, and noise polluting, AI data centers. Not more missile plants. This State's physical beauty can be preserved with the type of development that helps humans and the creatures with whom we share this space."

Please support the people you are sworn to serve by treating this application with the utmost due diligence, including by holding a public hearing, and enforcing the governor's Climate Action Plan and ozone limits.

Sincerely

Rachel Coleman
