

Ethan deBoer

Project Jupiter needs to be stopped. We do not need AI, it brings no good to us. It's been proven to give false information and it can't even properly generate a human hand. Why bother to waste an unreasonable amount of water and release a horrible amount of carbon dioxide into the air every single day. We are facing so much damage due to climate change, that's our fault. We need to fix it, we need to give back to the earth, and we need to use less technology. Where they wish to put this data centre is used to have a beautiful river that is now nearly completely dried up before summer has really begun. The centre would dry it up completely, that is incredibly sad. This is a horrible decision that cannot be made. There has also been toxic waste dumped in this area, do you know about the Niagara Falls incident? A town who thought they lived safely suddenly started realizing weird deformity's in all newborns. Mothers saw that many others children had the same issues, which isn't normal at all. People had also been dying faster than normal. They did an investigation and it was revealed that the government knew of the waste that had been dumped for years, but cleared it and built a town anyway. Toxic chemicals were still everywhere, first on the ground and in the water. Then they built the town and the chemicals spread into everything. This county you want to put the data centre is also heavily impacted by environmental pollution. This land, habitat, and ecosystem is collapsing like many other places around the world that are not just homes to us. There are so many animals facing extinction because of us. We need to stop and help them. If we seriously are the most intelligent species why do we continue to hurt them? Shouldn't we used our intelligence to help and support them? We should be focused on eliminating useless forms of technology, especially Ai, we should be planting more trees to restore forests, we should lower the amount of deforestation that occurs globally, We should be more mindful about how much water we use, we should make illegal to not recycle, we should find ways to reduce landfills and keep stuff out of our oceans, we should find a way to save the arctic. There's hundreds of amazing things we could do for this earth that we don't. We need our earth not Ai. When the last tree falls, the last river is poisoned, plants can no longer grow, and animals have been wiped out. You will realize the damage that this centre along with all centre's and additional supports to Climate Change and environmental pollution and impacts have caused. Where will go after that? We will never be able to fix that. Please, if you care at all for the environment, ecosystems, habitats, animals, our earth, and our futures then do not build this data centre.
