

## Juno Hyndman

This new plant is going to kill our air, it is the biggest plant to be ever built and there is no plant that can store and create this much carbon dioxide before. It's already been fined for ILLEGALLY storing, transporting, and dumping this toxic waste and they falsified the records to covered it up. It's already been through illegal business and coverings. It won't help protect nor restore the environment, it will absolutely destroy it more. And you know that. It will contribute even more to climate change, we need this plant to not be built for the sake of our planet. Climate change only has three years left before it is irreversible, WE NEED ACTION TO STOP CLIMATE CHANGE BEFORE ITS TOO LATE. We can still stop climate change, we need to act fast. Building stuff like this will only contribute to climate change, we need to save our planet before it's too late and our time is almost up.
