

Grace Abler

I do not support Project Jupiter on the grounds that the project will be extremely detrimentally to the community members of New Mexico. This data center will massively increase the level of pollutants that are put into the air, ensuring that Project Jupiter will have negative health impacts on residents of Santa Teresa and surrounding areas. The health and safety of our neighbors should always be official's number one priority. Beyond the air quality degradation that this project is sure to produce, it will also use a huge amount of water in a state where that precious resource is already so scarce. The Rio Grande is dry in so many places throughout our state, moving forward with the project is entirely irresponsible and would be a devastating mismanagement of resources. I strongly urge NMED to deny this permit in a larger effort to halt Project Jupiter from being built.
