

Carleen Sajkowsky

I am vigorously opposed to Yucca Growth Infrastructure building the microgrid for Project Jupiter as well as Project Jupiter itself. Southern NM is not only suffering from a catastrophic water shortage but we also suffer from poor air quality due to weather inversions, winds and more frequent fires in the region. The proposed fuel cell grid to power Project Jupiter is not only unproven for a project this size but is estimated to put out more pollution per year than Las Cruces and Albuquerque combined (I've even seen some estimates add Santa Fe). Too little information has been provided by Yucca Growth Infrastructure. Deny this permit and require more information be made available as well as more public meetings for Southern NM residents to respond to this preposterous project.
