

Molly Biggs

as a citizen and a physician, I absolutely oppose approval of the Yucca Growth Infrastructure, LLC-YGI Microgrid Air Quality Construction Permit Application. This project is unlikely to provide sufficient economic benefit to the state to offset the harms to air quality in our state. I've seen first hand how air quality affects vulnerable patients, the rates of chronic lung disease from asthma to emphysema are already quite high in New Mexico and projects like this will severely affect many vulnerable new Mexicans and overburden our already struggling health system. the projected water use and heat generation additionally make this project untenable in our state. please listen to the real people here in NM and deny this permit.
