Please reconsider this project. Project Jupiter will threaten the already limited water supply that communities need to survive, due to the fact that data centers all use up too much water to bring back. The fuel cell gas for the project will also release around 10 million tons of carbon dioxide annually. Which would worsen the climate change and heatwaves that we are already going through. Project Jupiter's fuel cell plant will generate enormous amounts of hazardous waste containing cancer-causing chemicals (benzene), heavy metals (lead, arsenic, chromium), toxic compounds (sulfur,...). All of these poison the human body, our water, and our soil. Also, mostly nobody has asked for this project, and nobody will benefit from it in any way. Project Jupiter is a disaster and can worsen and/or threaten human lives, harm the environment, cause harm to animals and affect the climate.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
