

Jessica Meyerson

Any infrastructure that makes it easier for these AI companies to extract water and energy from our communities has to be stopped. They make promises about jobs, and promises about tax revenue - but we all know that they are playing on the hopes and economic precarity that so many of my fellow New Mexicans experience . Instead - they will come, they will take what there is to take, and they will leave polluted water, carbon emissions, and absolutely NOTHING for the people of this state. These companies lie - they do not care about our present circumstances much less our children's futures. They are presentist in their thinking - but no amount of money will be able to repair the damage done if this project goes through. As a proud New Mexican - ABSOLUTELY NOT.
