

## Tammi Stuebe

I am writing to strongly oppose this project. While proponents often cite vague economic benefits, the reality is that these massive facilities impose disproportionate costs on our community. I oppose this project for three critical reasons: Strain on Infrastructure & Utilities: Data centers are incredibly power- and water-intensive. Allowing this facility will strain our local power grid, increase the risk of outages, and potentially drive up electricity rates for everyday families. Environmental & Noise Pollution: Continuous cooling operations and diesel backup generators create an incessant, low-frequency hum alongside potential emissions and water contamination risks. This represents a significant degradation of our local environment and quality of life. Low Community ROI: Despite the massive footprint and required infrastructure, data centers offer very few long-term, permanent jobs compared to other industrial or commercial developments. The local tax revenue gained does not justify the burden placed on our community's resources. I urge you to oppose this project and deny the permit. Thank you for your time and for protecting the interests of our community.
