

Lydia Howald

It is of the utmost importance to protect what little water is left in these surrounding areas. There is no clean energy that could be used for the status centers. All that would be accomplished is hurting the environment and surrounding communities even more. These data centers that want to use our water resources only leave destruction behind. We cannot allow corporations to come in and steal resources to further destroy our environment that desperately needs our help. Please do the right thing and stand up to protect the land and the people of the surrounding communities.
