Hi, I'm here to leave my comment to stop the Jupiter project. I don't know what else to write, other than I present my support to stop this project that will only cause more harm to the earth and possibly bring very bad consequences to the environment. The project is quite useless, not only because it's for AI, but also because it consumes water in a very worrying way, the same water that many people need and regions that are scarce of it, in addition to the terrible changes it can cause in the environment, which is already happening in a bad State.
