

Julian Wright

Our planet is already struggling with droughts due to data centres. Project Jupiter is avoiding telling us the devastating impacts that their "project" will cause. Projects used to describe an amazing development in research and conservation. This is doing the opposite. The clean water they run through and then put back into the same water sources will be hotter and will destroy ecosystems, leading to the mass death of aquatic life and the animals who rely on it for food. Project Jupiter is a biological genocide waiting to happen. I don't want to grow up in a world that prioritises generative ai over the health of the planet and marginalised communities. I'm 18 and shouldn't be worrying about my future because OpenAI wants to make it possible for people to generate photos of themselves as a caricature. It's horrendous that the public isn't given more time to vote on this! Communities need to time to be notified this is even happening and can be protested against and that their air quality is at serious risk due to a permit that's being reviewed for this project. It should be denied! This company has a heavy past of dumping hazardous waste that isn't only a danger to the wildlife and ecosystems but can cause real harm to the communities they are sacrificing for Project Jupiter. Sacrificing these communities in this way is environmental racism that is sponsored by the government. The impact it will have on the people living there will be devastating and irreversible. This project is disgusting and needs to end.
