

Guro Lakså

This is such a horrible idea because data centers in general pollute the water and environment around it making it unsustainable and not safe for the general public nor the wild to live there, they also produce noise pollution that is a constant reminder of the mistake called project jupiter. Although this won't directly affect me in the near future it sure as hell will in the long run. We've had enough of generative AI and it's bullshit. It makes us stupid and it feeds us misinformation. Generative AI is not the solution. Stop this immediately.
